

RUAG training support for combat training centres

Training support

RUAG training support includes: preparation of all exercise relevant pre-arrangements such as equipping, registering and instructing the trainees on the man-worn and vehicle simulation equipment. RUAG experts transform the training area into an instrumented battlefield in accordance with the customer requirements to ensure the greatest benefit for the user. During training RUAG operates all technical installations, provides recording for after action reviews (AARs) and carries out field support if required. During operation RUAG also supports the instructors in handling, recording and evaluating exercise events. After training RUAG takes charge of the simulation equipment, its repair and maintenance, replacement, restocking and storage. This allows the military personnel to focus on their main task - military training.

Technical operation of complex training centres by skilled personnel

- Equipment & Site Preparation
- Technical Support during Operations
- Technical Instruction
- Mobile Support & Troubleshooting
- On Call "On Site Support"
- Preventive & Corrective Maintenance
- Calibration & Validation
- Supply Change Management
- System Management
- Integrated Logistics Support, ILS
- Repair Management (3rd & 4th Level)
- Help Desk & Remote Control Care

Functional interactions

Operation support

Full service support – one point of contact

Military training is becoming increasingly technically oriented. Technical operation of complex installations such as training centres manned by skilled personnel is often the only way to enable a trainee to concentrate on his core task, i.e. military training. The efficient operation of the training infrastructure is indispensable to the operation of the facility and the benefit of the user. RUAG offers associated support before, during and after training with one point of contact. RUAG guarantees operation 24/7/365.

Site preparation

Exercise preparation

Extensive experience in highly sophisticated live and virtual technology and simulators

As a manufacturer of simulators for live and virtual training RUAG is familiar with the operation and support of such complex and technologically demanding equipment.

The support provided encompasses the provision of all simulation equipment for the soldiers and vehicles, the effect simulators and instructions. Furthermore, RUAG support comprises maintenance and upgrades for equipment, buildings and training infrastructure. Services such as configuration management, software upgrades, documentation etc. complete RUAG's full service support package.
