Zurich (CH) / Oberpfaffenhofen (DE), 01.03.2021

RUAG International completes sale of RUAG Aerospace Services GmbH to General Atomics Europe

RUAG International has transferred all shares in RUAG Aerospace Services GmbH to General Atomics Europe (GA-Europe). GA-Europe will take over the maintenance activities for private aircraft and military aircraft as well as the production and maintenance of the Dornier 228 aircraft at the Oberpfaffenhofen site as of 1 March 2021.

With the transfer of ownership (contractual closing) from RUAG Aerospace Services GmbH to General Atomics Europe (GA-Europe), all company shares have been transferred to the new owner. The sale process has thus been contractually completed. GA-Europe is taking over all business activities as well as all of the approximately 420 employees. At the Oberpfaffenhofen site, RUAG International continues to employ 800 people in aerostructures construction (RUAG Aerostructures) – this business segment is not affected by the sale.

Felix Ammann, former Managing Director of RUAG Aerospace Services GmbH, says: "We are very pleased with the successful conclusion and wish General Atomics Europe every success for the future. We are convinced that they bring excellent prerequisites with them to successfully continue the business activities and sustainably secure the jobs for the future."

Harald Robl, Managing Director of General Atomics Europe, adds: "With this acquisition, GA-Europe is sustainably strengthening its market positioning in the aviation business. We have developed a strategic concept for the future that will open up new growth and value creation prospects for the Oberpfaffenhofen site, far beyond the existing business areas, despite the current economic crisis."

A corresponding agreement (signing) for the acquisition of the business activities of RUAG Aerospace Services GmbH has already been signed by both companies on 30 September 2020 (see announcement dated 15 October 2020). The sale is in line with the concept for the unbundling and realignment of RUAG International approved by the Swiss Federal Council on 15 March 2019. The parties have agreed not to disclose the contractual terms.

Further developed and expanded

RUAG International took over the two divisions Services and Components of the former German aircraft manufacturer Fairchild Dornier in 2002. After the takeover, RUAG Aerospace Structures GmbH (RUAG Aerostructures) and RUAG Aerospace Services GmbH were created.

With the transfer of the services division, the then RUAG supplemented the product and service portfolio with the production of the Dornier 228 and its customer support, as well as maintenance on business jets and military helicopters. In 2007, RUAG began further development of the Do228 into the Do228 Next Generation, and in 2009 RUAG resumed production of the aircraft. The successful maiden flight of the new series aircraft took place on 30 July 2010. To this day, the

Do228 NG is manufactured in Oberpfaffenhofen and Customer Support looks after customers worldwide.

In the field of military helicopter maintenance, new orders were secured for the NH90 of the German Armed Forces. The site is thus well positioned for the future. In business jets, the company focused on creating added value for customers through its "one-stop shop" approach. This also strengthened its position in the market thanks to the improved customer experience.

General Atomics Europe GmbH, headquartered in Dresden, is a medium-sized service and consulting company that holds stakes in eight subsidiaries with a total of around 600 employees. In addition to business activities in the field of aviation, the range of services includes the modernisation and maintenance of rail vehicles, the disposal of conventional ammunition and explosives, special construction services and environmental remediation, engineering prefabricated reinforced concrete components, environmental monitoring and water technology. Today's GA-Europe has its roots in the former Spezialtechnik Dresden GmbH, which was taken over by the family-run US company General Atomics in 1992 and has since been consistently developed further. General Atomics is a global technology group with more than 10,000 employees and is headquartered in San Diego, California. www.ga-europe.com

RUAG International is a Swiss technology group with production sites in 14 countries and is divided into four divisions: Space, Aerostructures, MRO International and Ammotec. RUAG International employs around 6,500 people, of whom around two thirds work outside Switzerland. www.ruag.com
